## **ChemUhat** A brand under Watson Recombinant Rhesus Macaque Interleukin-3 (rRhIL-3)

## **ChemWhat Technical Data Sheet (TDS)**

Source:       Escherichia coli.         Molecular Weight:       Approximately 14.0 kDa, a single non-glycosylated polypeptide chain containing 124 amino a 2µg/10µg/1000µg         AA Sequence:       APMTQTTSLK TSWAKCSNMI DEIITHLNQP PLPSPDFNNL NEEDQTILVE KNLRRSN FSKAVKSLQN ASAIESILKN LPPCLPMATA APTRPPIRIT NGDRNDFRRK LKFYLKTT EQAQ         Purity:       > 98 % by SDS-PAGE and HPLC analyses.         Biological Activity:       Assay #1: Fully biologically active when compared to standard. The ED <sub>50</sub> as determined by the dependent stimulation of the proliferation of murine NFS-60 cells is less than 5.0 corresponding to a specific activity of > 2 × 10 <sup>5</sup> IU/mg.         Physical Appearance:       Sterile Filtered White lyophilized (freeze-dried) powder.         Formulation:       Lyophilized from a 0.2 µm filtered concentrated solution in PBS, pH 7.4, 5 % trehalose.         Endotoxin:       Less than 1 EU/µg of rRhIL-3 as determined by LAL method.         Reconstitution:       We recommend that this vial be briefly centrifuged prior to opening to bring the content bottom. Reconstitute in sterile distiled water or aqueous buffer containing 0.1 % BS concentration of 0.1-1.0 mg/ml. Stock solutions should be apportioned into working aliquistored at≤ -20 C. Further dilutions should be made in appropriate buffered solutions. The product is shipped at ambient temperature. Upon receipt, store it immediately at the tem recommended below.         Stability & Storage:       Use a manual defrost freezer and avoid repeated freeze-thaw cycles.       12 months from date of receipt, -20 to -70 °C as supplied.         I month, 2 to 8 °C under sterile c	
Quantity:       2µµ/10µµ/1000µg         AA Sequence:       APMTQTTSLK TSWAKCSNMI DEHTHLNQP PLPSPDFNNL NEEDQTILVE KNLRRSN FSKAVKSLQN ASAIESILKN LPPCLPMATA APTRPPIRIT NGDRNDFRRK LKFYLKTT EQAQ         Purity:       > 98 % by SDS-PAGE and HPLC analyses. evaluation purposes. NOT FOR HUMAN USE.	

## **Rhesus Macaque Interleukin-3**

Interleukin-3 (IL-3) is an interleukin, a type of biological signal (cytokine) which is encoded by the IL-3 gene located on chromosome 5 and produced primarily by activated T cells beside human thymic epithelial cells, activated murine mast cells, murine keratinocytes and neurons/astrocytes. The protein acts in hematopoiesis by controlling the production, differentiation, and function of 2 related white cell populations of the blood, the granulocytes and the monocytes-macrophages. The rhesus macaque IL-3 reported to be a monomer, as it is known, contains 124 amino acids residues which is a single non-glycosylated polypeptide. Specifically, recombinant rhesus macaque, human and murine IL-3 share low homology.
