

ChemWhat Recombinant Human Parathyroid Hormone 44-68
A brand under Watson
(rHuPTH44-68)

ChemWhat Technical Data Sheet (TDS)

Catalog Number:	301-19
Source:	<i>E. coli</i>
Molecular Weight:	Approximately 2.84 kDa, a single polypeptide chain containing 25 amino acids. Sequence verification of rHuPTH44-68 (2.84 kDa) by high-resolution mass spectrometry.
Quantity:	20µg/100µg/1mg
AA Sequence:	RDAGSQRPRK KEDNVLVESH EKSLG
Purity:	> 97 % by SDS-PAGE analyses.
Application:	WB, ELISA.
Physical Appearance:	Sterile Filtered White lyophilized (freeze-dried) powder.
Formulation:	Lyophilized from a 0.2 µm filtered concentrated solution in PBS, pH 7.0.
Endotoxin:	Less than 0.1 EU/µg of rHuPTH44-68 as determined by LAL method.
Reconstitution:	We recommend that this vial be briefly centrifuged prior to opening to bring the contents to the bottom. Reconstitute in sterile distilled water or aqueous buffer containing 0.1 % BSA to a concentration of 0.1-1.0 mg/mL. Stock solutions should be apportioned into working aliquots and stored at ≤ -20°C. Further dilutions should be made in appropriate buffered solutions.
Shipping:	The product is shipped at ambient temperature. Upon receipt, store it immediately at the temperature recommended below.
Stability & Storage:	Use a manual defrost freezer and avoid repeated freeze-thaw cycles. <ul style="list-style-type: none">● 12 months from date of receipt, -20 to -70 °C as supplied.● 1 month, 2 to 8 °C under sterile conditions after reconstitution.● 3 months, -20 to -70 °C under sterile conditions after reconstitution.
Usage:	ChemWhat Limited in UK offers this branded product for research, development or further evaluation purposes. NOT FOR HUMAN USE.

Human Parathyroid Hormone 44-68

Parathyroid hormone (PTH) is a single polypeptide of 84 amino acids. It is a critical hormone in the regulation of Ca²⁺ homeostasis and secreted by the parathyroid glands, which promote release of calcium from bone to extracellular fluid by activating osteoblasts and inhibiting osteoclasts, indirectly promote increased intestinal absorption of calcium, and promote renal tubular reabsorption of calcium and increased renal excretion of phosphates. It is a major regulator of bone metabolism. Secretion of parathyroid hormone increases when the level of calcium in the extracellular fluid is low.
